EFI Injectors, all makes of Pressure Relief Valves and Lucas Mechanical Metering Units, and need 3 micron protection, but 3 micron filters plug up too quickly, so most racers use 10 micron, which is too coarse. We made this new element for NASCAR Cup cars: 10 micron premium paper top layer to take out 95% of the dirt, with a 3 micron precision Fiberglass lower layer. Details: Kinsler.com home page.

MANUFACTURERS' REPRESENTATIVES

An invaluable link between suppliers and the customers who move their products, manufacturers' representatives interact with everyone from the largest warehouse distributors to the smallest speed shops and engine builders. They typically act as a supplier's outside sales force. Many also work trade shows and/or car shows for their clients, while others manage their customers' wholesale operations.

WAREHOUSE DISTRIBUTORS

These operations bridge the gap between motorsports industry suppliers and the retail businesses that deal directly with racers and team members. Among their myriad functions, warehouse distributors (WDs) provide valuable storage space, communication tools, technical support, cataloging, and other useful services. Several also work within an established marketplace, giving them unique insight into the parts and equipment in demand for a specific region.
